

Use ChemBioDraw to attach images to posts on [Chemistry Community](#).

Within ChemBioDraw create molecule and Save As (select PNG, select Options, select Resolution 1200).

Upload PNG to Chemistry Community.

Make sure to label/name/describe all molecules uploaded.

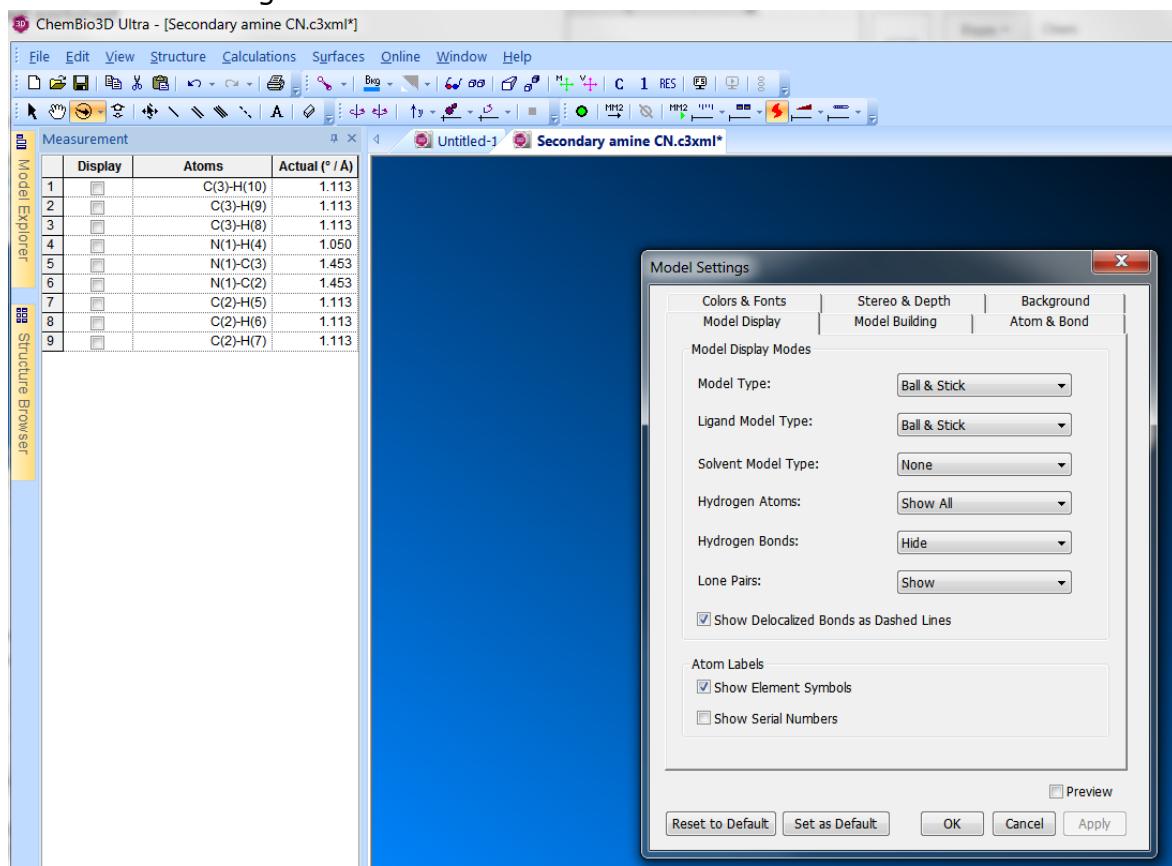

If ChemBio3D is preferred for creating an image. Here are the screenshot settings for creating high quality PNG files within ChemBio3D:

Using settings in ChemBio3D (right box) gives high resolution PNG file (32-bit depth).

Left box lists example PNG file settings. Note 32-bit depth.

Label atom types: C, N, O, S, P, etc. (use black large font (Verdana size 14pt is good))  
See Model Settings under File:

Name and briefly describe the uploaded image.

If a line structure for an organic molecule is clearer then use ChemBioDraw.

When you Save As and select PNG make sure extension is .png in the file name.
