## Ch 15: Chemical Kinetics - Integrated Rate Laws Worksheet

1. Consider the reaction:

$$
\mathrm{A}+\mathrm{B} \Rightarrow \mathrm{C}+\mathrm{D} \quad \text { rate }=k[A]^{2}
$$

True or false: The time it takes for [A] to decrease from 1.0 to 0.50 M is the same as the time it takes for $[\mathrm{A}]$ to decrease from 0.50 to 0.25 M .
2. A. ) Label the axes for these reactions relating concentration to time. B. ) What is the slope of each graph?

Slope: $\qquad$

Zeroth-order Reaction

Slope: $\qquad$

First-order Reaction

Slope: $\qquad$

Second-order Reaction
3. In the following question, reactant A decomposes into products. The concentration of A can be measured with respect to time. Use the table and graph to show that the reaction is first order with respect to $A$.
a. Complete the table labeled with a * that will give the needed information to make a linear plot.

| Time (s) | $[\mathrm{A}](\mathrm{mol} / \mathrm{L})$ | $*$ |
| :---: | :---: | :--- |
| 0 | 3.00 | $*$ |
| 15 | 2.19 | $*$ |
| 45 | 1.17 | $*$ |
| 105 | 0.33 | $*$ |

b. Make a plot below to show that the reaction is first order.

|  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

$X$ axis label
4. Derive an expression for the integrated rate law for this third order reaction:

$$
\text { rate }=-\frac{d[A]}{d t}=k[A]^{3}
$$

5. The recombination of iodine atoms to form molecular iodine in the gas phase follows second order kinetics and has a high rate constant of $7.0 \times 10^{9} \mathrm{M}$.s at $23^{\circ} \mathrm{C}$

$$
I(g)+I(g) \rightarrow I_{2(g)}
$$

a. If the initial concentration of I was 0.086 M , calculate the concentration after 2.0 minutes.
b. Calculate the half life of the reaction if the initial concentration of $I$ is 0.60 M versus if the initial concentration is 0.42 M .
6. Mercury (II) is eliminated from the body by a first order process with a 6 day half life. A farmer accidentally ingests Hg (II) by eating contaminated grain. What percentage of the Hg (II) would remain in his body after 30 days if no therapeutic measures are taken?
7. A substance A decomposes in a first order reaction and its half life is 355 seconds. How much time must elapse for the concentration of A to reach $1 / 8[A]_{0}$ ?
8. In the first order reaction $A \Rightarrow$ products, it is found that $99 \%$ of the original amount of reactant A decomposed in 137 minutes. What is the half life of this decomposition reaction?
